

**Network Software Failover**

Automatic failover capability across a LAN or WAN link

- Peripheral Switching:
  - No hardware peripheral switching panel required
  - Switched resources such as Commlines hosted on off-the-shelf serial network servers available to both masters
- File Synchronization:
  - A and B masters can be in physically remote locations for disaster recovery
  - File synchronization across the LAN or WAN link
- Negotiation Logic
  - Software Online/Standby negotiation in place of logic cards in panel
  - Masters mutually agree on failover action
