

Operator Training Simulator

Training Simulator Attributes:

- Provides the ability to create training scenarios on a copy of the EOscada database.
- Injects simulated data in real-time to EOscada and responds to operator actions with scripted responses.
- Simple scripts for trip, close, jitter, saw tooth.
- Timed scenarios for setting, overriding, and resuming values and states in configurable sequences.
- Runs in parallel with an operational EOscada system. EOscada user applications indicate that they are in << Simulation Mode >>. A copy of the on line EOscada database is used for realistic simulators.
- Separate user interface for administration of the simulation, including:
 - Opening, developing, and saving scenarios
 - Starting, stopping and pausing a simulation
 - Taking snapshots and saving the online database
